## A GOOD PASTURE PROGRAM OFFERS REAL OPPORTUNITIES

By HENRY MAYO

Extension Animal Husbandman,  
Purdue University

### Pastures Are Important

In these days of rising costs and declining incomes for farmers an efficient beef cattle and pasture program may be the means of maintaining net profits on many farms. A good pasture program offers real opportunities for:

1. Soil conservation and improvement.
2. Less amount of labor.
3. Less expensive meat production.

Soil conservation and improvement are the same as money in the bank. Grass is one of nature's very effective means of preventing soil erosion. Any increase in soil fertility from crop residues, manure, or commercial fertilizers is retained in the soil if it is covered by a good healthy sod. From 70 to 90 per cent of the nutrients produced by the pastures and consumed by beef cattle are returned to the soil in the form of manure, and kept there if there is a good sod.

Saving labor is important on any farm. Cattle are efficient in harvesting pasture and converting it into meat. They are equipped by nature to utilize large amounts of grass and forage. With sufficient amounts of good pasture, 500 pound calves can be produced by October 1, by little more than providing fly protection, shade, water, and salt. In addition to summer grazing, the pasture season can be lengthened on many farms by saving well drained pasture areas for pasture during winter and wet weather.

The present cost-price squeezes make it necessary for farmers to produce meat at a lower cost per pound. A good pasture program makes this possible. During the past two years ten Indiana farmers have actually produced entire calf crops that averaged more than 500 pounds per calf on October 1. Most of these calves received no grain.

### Pasture Management

Records and close observations by experienced cattlemen show that a few changes needs to be made in pasture production and utilization. Birdsfoot trefoil pastures are gaining in popularity as permanent pastures. They have never been known to produce bloat. Once established they grow in

perfect balance with permanent blue grass. Last year in Indiana a birdsfoot-ladino-brome grass pasture produced 605 pounds of beef per acre, more than \$100 per acres if beef is worth 20 cents per pound! And this was on rolling land not adapted to produce corn more than one year in six.

Rotation pastures should contain at least 50% grass, such as timothy, brome, or orchard grass, along with the legumes. This reduces the danger of bloat and improves the quality of the feed.

Pastures that are allowed to attain some maturity (partially head out) provide a more nearly balanced ration. Pure immature legume pastures provide too much protein, not enough fiber, and not enough carbohydrates, causing bloat and scours, thus reducing gains.

### Cattle Management

The value of good pastures can only be realized if a good cattle management program is followed. Calves born in January and February will be twice as heavy as May and June calves on October 1. These early calves can utilize the pasture plus the increased milk from their mothers. This means that the bull must be kept away from the cows about eight months each year.

Good bulls are basic to a good cattle production. They must be strong, active breeders capable of settling every one of at least 30 cows with calf in not more than two months. They must have gaining ability so that they can sire calves that will likewise gain rapidly. Also they must be thick and possess large amounts of natural muscling.

Calves should be dehorned and bull calves castrated (not clamped) before they are two months old. Records collected at feeder calf sales in southern Indiana indicate that dehorned and polled calves sell for about \$1.50 per hundred, more than horned calves of similar grade. Castrated steer calves sell for \$4 to \$5 more per hundred than staggy or bull calves. This means an added income of \$30 per 500 pound calf if it is properly dehorned and castrated!

Comfort for cattle is imperative. Shade, water, and fly control should be readily available to every animal in every pasture. Back rubbers that are kept moist with a 5% DDT emulsion are effective. See your County Agent for Purdue Entomology Mimeo E12.

## SOME THOUGHTS FOR '56

By H. W. WALKER

"Whatever you have seen or heard that was interesting," was Gail Maurer's answer to my question, "What do you want me to write about?"

I know that many of you attended the Purdue Agricultural Conference and went away with renewed inspiration and many new thoughts and ideas on how we can improve our production and marketing programs.

I was especially interested in two talks given at the Indiana Livestock Breeders' meeting on improving what we have to sell and our methods of selling it.

Martin Katter, Wapakoneta, Ohio, veteran Shorthorn and Duroc breeder, stated: "Not only do you have to breed quality livestock but you must advertise and keep advertising." Martin has made an outstanding record in the swine industry and is an authority on breed promotion. Here is a farmer-breeder whose success proves the value of keeping his name and his hogs—his product—before the public. He stated that he uses 10% of his gross sales for advertising.

Are we giving the merits of our Shorthorns adequate coverage and repeating it often enough?

"Plan what you wish to do, go do it and keep after it," was the advice of Rollie Pemberton, Secretary of the Hampshire Swine Association. He stated that the purebred product is more in demand, for the time is coming when the commercial breeder must raise an improved product and will turn to the purebred breeder for improving sires. He stated that all livestock producers must strive to produce the type and quality product that is demanded by the housewife, as it is she who decides to a large extent which meat she will serve, and it is up to the producers of the various types of livestock to strive to make their product the one that gets her business. He cited the poultry industry as one that has done a very good job in improving its product and presenting it in an appealing manner.

In bettering our marketing methods it is important that we remember the value of eye appeal, keep our animals "shined up" and show them as often as possible to as many people as possible, and create in our prospective customers a desire for a more modern, better model Shorthorn just as the automobile salesmen do.

We have an excellent product—our Shorthorns. Let's improve them and let the world know about them.

## Interest In Boone County 4-H Breeding Class Shows Increase

The 4-H advance enrollment in Boone County is much higher than county agricultural agent Munns A. Caldwell expected, however, it is not as large as the 1955 enrollment.

Mr. Caldwell added that this advance enrollment is not an indication that the total enrollment will be less as club members have until May 15 to enroll in various projects. From all indication, the interest is very good and the total enrollment should exceed 990, the 1955 enrollment.

The Beef Calf club project has made some decided changes. One hundred and sixty-nine calves have been enrolled, but this is only three less than 1955. The change came with less steer calves and a larger number of registered heifer calves.

There is a decided decrease in the number of Hereford calves. Last year there was a total of 93 calves enrolled, as compared to 73 this year. However, there is a total of 15 heifers, or five more than the 1955 enrollment.

The Shorthorn breed has made the greatest change. The enrollment jumped from 35 to 54 this year, including nine more steers and 10 more heifers.

The Angus breed held its own with an increase of two calves over the 1955 total. Three more heifers and two less steers are enrolled.

With 49 registered heifers in the three breeds, there should be an excellent showing in the 4-H breeding classes.

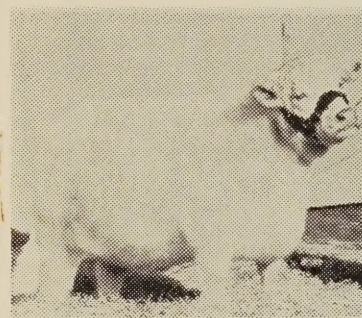

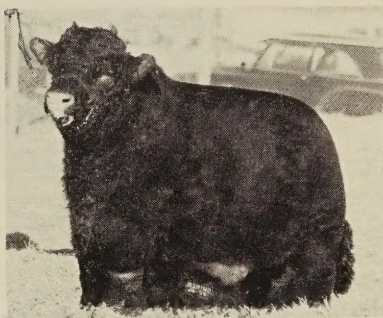

# HANSON HEIGHTS FARMS

## Consignment To The INDIANA ALL BULL SALE

MARCH 16, 1956

Hanson Heights Farms are consigning to the Indiana All Bull Sale at Amity, Indiana, Friday, March 16, three good sons of Strowan Souvenir (pictured above) and two good sons of Beaufort Barony. These two bulls are the first Barony calves to sell in an Indiana State Sale.

## Consignment To The BOWLING GREEN SALE

MARCH 24, 1956

An outstanding pair of females consisting of the reserve grand champion female (pictured above) at the Eastern National safe in calf to Leveldale Northern Light and an exceptionally good daughter of Beaufort Barony suitable for a 4-H club project in the 1956 shows.

## A FEW OF THE MANY THINGS THAT MAKE US VERY PROUD HERE AT HANSON HEIGHTS FARMS

### GLATWYN FARMS Polled Shorthorn Cattle

Mr. B. Hollis Hanson  
Hanson Heights Farms  
Connersville, Indiana  
Dear Hollis:

Congratulations to you folks as we hear that you have a new daughter in your house.

Also congratulations to you on your fine showing at Denver, Phoenix, and Ft. Worth. I haven't heard any further than that. Sure was glad to see you get the steer up at Phoenix.

The reason for writing is to let you know that we have something nice at our house too. No, nothing nearly approaching the importance of a daughter but we are proud.

HHF Nonpareil Beauty B 6th has a very nice red polled heifer calf by Broadway Hallmark. It looks right and is starting off fine. The heifer is milking adequately and also looks all right. This could be the best calf we have so far this year.

Good luck in the rest of the shows.

Sincerely yours,  
Gerald I. Clodfelter.

On the left is the picture of H.H.F. Senator Souvenir grand champion bull at the 1955 Indiana Shorthorn and Polled Shorthorn Futurity Show. In the center is an unsolicited testimonial of how Hanson Heights cattle produce for their new owners.

## CONTROL OF CATTLE GRUBS

**DAMAGE.** Grubs in the backs of cattle reduce milk production of dairy cows and cause beef animals to put on weight more slowly. Cattle buyers pay less for grubby animals because damaged meat must be trimmed away and the hides are ruined for top grade leather.

**LIFE CYCLE.** The eggs which hatch into cattle grubs are laid on the animals during the summer months by insects known as "heel flies" or "bot flies," which also scare the cattle causing them to run wildly. The eggs are never laid on the cattle's backs but instead are glued to hairs on the lower parts of the body usually on the hind legs near the hocks. When these eggs hatch the young grubs penetrate the skin and commence to burrow through the connective tissues feeding and slowly working their way toward the back. This journey requires nearly nine months, and when the grubs reach the back they cut small air holes in the hide and complete their growth causing the lumps characteristic of their presence. When full grown or "ripe" the following spring, the large fat grubs drop out of their own accord and burrow into the soil. A few weeks later they emerge as hairy bee-like flies which lay eggs for another generation. Fortunately the flies do not fly far from their origin, and, if all farmers in a neighborhood treat their cattle, the heel fly menace can be greatly reduced.

**CONTROL.** Any one of the following procedures will quickly and effectively control cattle grubs. Make the first treatment when the lumps become noticeable and repeat if additional lumps show up at a later date.

1. **ROTENONE SPRAY**—Use 7½ pounds of 5 percent rotenone-bearing derris or cube powder to 100 gallons of water. Apply with a power sprayer at 400 pounds pressure. Use one gallon of spray per animal, holding the spray nozzle 12 to 16 inches from the backs of the animals.

2. **ROTENONE WASH**—Use 12 ounces of 5 percent rotenone powder and 4 ounces of granular laundry soap to one gallon of water. Apply about one pint per animal, rubbing it into the back with a scrub brush. Commercial preparations containing the correct amount of rotenone are available.

3. **ROTENONE DUST**—Use a dust containing one part of 5 percent rotenone powder and two parts of pyrophyllite, Tripolo earth, or similar inert powder. Cattle grub powders containing this amount of rotenone (1½ percent) are generally available on the market. Use about 3½ ounces of dust per animal, rubbing it into the hair and grub openings with a stiff brush.

## EARL E. ROBBINS

Earl E. Robbins, nationally known as a prominent Shorthorn breeder and judge, passed away recently. He had been in declining health for the past six years and bedfast since July.

Mr. Robbins was one of the foremost contributors to the development of Shorthorn breeding cattle in the nation. Besides being a showman he gained recognition as a leading cattle judge.

Members of the Robbins family have engaged in the raising of purebred Shorthorn cattle since 1876 with Earl E. Robbins contributing many honors to the long list of championships.

Since his retirement from active duties, the business of Robinwood Farms has been continued under the capable management of the daughter and son-in-law, Mr. and Mrs. John A. Whitehead.

The Hoosier Shorthorn joins with the many friends of Earl E. Robbins in paying the family our profound respects in the passing of our mutual friend.

## MEYERVALE SHORTHORNS

**Herd Sire**

**IMP. KAIR BRIGADOON**

**Sire: Corrimony Golden  
Sovereign**

**Dam: By Calrossie Fearless**

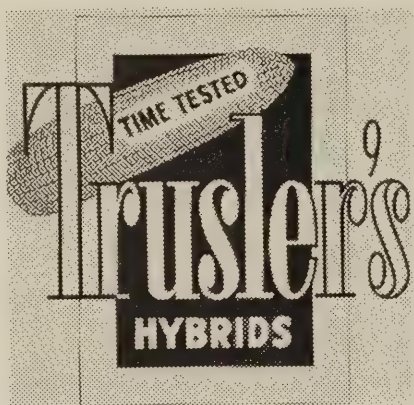

His calves have thickness and smoothness with plenty of size and weight for age.

Will have a dark roan son of Barquhar Commander and a dark roan son of Meyervale Allardice for the Fall Sales. Watch for them. They are the best prospects we have ever had.

## HIGHLIGHT OF THE ANNUAL MEETING

There were twenty-three Shorthorn breeders present at the annual meeting of the Indiana Shorthorn Breeder's Association when it convened in the Administration Building, Indiana State Fair Grounds, Indianapolis, Indiana, on December 16.

George Schull, publicity director for the American Shorthorn Breeder's Association, was the principal speaker. Mr. Schull gave an inspiring talk stressing a five point system that will aid in strengthening any Shorthorn organization. (1) increased promotional work; (2) combined efforts of polled and horned breeders; (3) personal contact among the breeders for an increased membership; (4) publicity committee to inform the public of the activities of the organization; (5) a definite program to work toward. This system was readily accepted and greatly appreciated by those present.

At the 1956 Indiana State Fair, the Association will again sponsor a Shorthorn booth, showmanship awards in both the 4-H Shorthorn heifer and 4-H Shorthorn steer classes, achievement award (registered Shorthorn heifer) to the outstanding 4-H boy or girl in the Shorthorn division, and the \$500.00 cash award for the Grand Champion Shorthorn steer. Along with these awards the Association will again sponsor the two Indiana State Sales, the annual picnic, the HOOSIER SHORTHORN breed magazine, and in cooperation with the Polled Shorthorn Association will sponsor the Indiana Shorthorn and Polled Shorthorn Futurity Show.

Each year, the Association tries to sponsor something new. This year they aim to have an Indiana State 4-H calf sale. Although this plan is still in the formulative stage, it promises to be a satisfactory plan that will be of great benefit to our young people.

New officers elected to serve for 1956 are: Durbin Budd, Lebanon, president; Lester Sigler, Elwood, vice-president; Gail Maurer, Connersville, secretary-treasurer. The four directors elected for a three year term are: B. Hollis Hanson, Connersville; Wm. Earl Wilson, Greenfield; Clyde Harlow, Tipton; Ernest Sims, Elkhart.

## FUTURITY ENROLLMENTS ENCOURAGING

Eighteen Shorthorn breeders (12 horned and 6 polled) have enrolled a total of two hundred and fifty-eight head of cattle for the 1956 Indiana Shorthorn and Polled Shorthorn Futurity Show. This number included 226 females and 32 bulls.

The 1956 Futurity Show will be held July 22 and 23 at Marion, Indiana.

## A Measuring Stick

In the next few months, the American voters will be reading and listening to the promises of numerous candidates for public office. High-sounding words and cleverly-turned phrases will camouflage many a trite and even selfish political plank into seeming like a panacea for all the country's ills. It will be difficult for the average man to unmask these verbal frauds but if he weighs them against the following natural laws, which have held up against repeal for centuries, he will recognize most of them for what they are. These laws are:

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage earner up by pulling the wage payer down.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot establish sound security on borrowed money.
8. You cannot build character and courage by taking away a man's initiative and independence.
9. You cannot help men permanently by doing for them what they could and should do for themselves.
10. You cannot further the brotherhood of man by inciting class hatred.
